

Rapidly deployable Drive-thru facilities

We are ready to support hospitals, companies etc. with triage centers and drive-thru testing facilities. Our structures can help relieve the pressure of the constant flow of new patients.

We can set up drive-thru stations on campuses for medical workers to safely test patient in a contained and professional environment. These testing facilities are a practical addition to the use of triage tents and help hospitals to organize their work in the best way possible, under the current circumstances. We can help companies to distribute and weatherproof the constant flow and pressure of customers to stores and restaurants with this solution. Our structures can be modified and tailor made to accommodate any size footprint, so we will always deliver a solution that fits like a glove.
